FEATURES

- Comprehensive, evidence-based and cutting edge in terms of topicality, quality and content
- Co-published with the 'World Association for Disaster and Emergency Medicine' (WADDEM)
- Highly accessible in style, broken down into digestible chunks, with generous use of figures, tables and photos

The effects of a disaster on health care can range from conditions that immediately besiege the system with large numbers of patients to those catastrophic conditions that strain its long-term sustainability. Nurses as frontline health professionals, must have an understanding of the situations they may face before, during and after a disaster and they must develop the necessary skills and strategies to provide effective and immediate care. Suddenly and unexpectedly, school nurses may find themselves working at a mass immunisation clinic; floor nurses may find themselves hand-ventilating a patient in the hallway of a hospital with no electrical power; and clinic nurses may have large numbers of patients arrive at the doctor's office because it happens to be the closest medical facility to an unfolding disaster.

International Disaster Nursing is an accessible, comprehensive resource that addresses a multitude of scenarios, and highlights the diversity of issues that nurses, and indeed all health professionals, may face during a disaster event. This text identifies and defines the many roles of the nurse and aids the implementation of the community's disaster plans in a crisis. It provides important information regarding regional and international emergency management agencies and how nurses might coordinate efforts with these groups to ensure that the best possible level of care is provided during a disaster situation.

CONTENTS

1. Introduction to Disasters and Disaster Nursing
2. Healthcare Facility Preparedness
3. Community Response
4. First Response
5. Disaster Triage
6. Hospital Impact: Acute Care
7. Hospital Impact: Immediate Issues
